## Calendar Commander With Full Keygen Free Download PC/Windows

Design, customize and save up to three calendar types, including birthdays, lunches and weddings. Open images from your computer, Facebook, or Google Drive, so you can continue editing them as needed. Add text to any image by writing on top of it. Create, edit, and rearrange event pages. Organize and print your calendars. The app doesn't use any passwords or third party solutions. Desktop version with bundled Linux and Windows editions is free, while the Mobile edition works on Android and iOS. Visit the website to get Calendar Commander on: [Linux and Windows Download Now](#)

Q: AngularJS: custom directive templateUrl doesn't load html string I have created a custom directive which I want to load a html string as template. My custom directive looks like this:

```
app.directive('customDirective', function() { return { templateUrl: 'test.html' } });
```

The HTML template is: `{{label}}` In my controller I have a function like this:

```
$scope.redraw = function() { $scope.label = 'red'; }
```

My directive is applied to a div like this: The HTML file

---

with my template doesn't get loaded. If I use a url like "/test.html" it works, but I want to avoid this. Can anyone tell me why it doesn't work and how I can achieve this? A: What is probably happening is that Angular is only loading the script. It doesn't load the template. If the templateUrl is not relative to the current module, it is assumed to be an absolute path. This means you can do it like this: templateUrl: '../templates/test.html' Which in this case is the templates directory. Angular's bootstrapping mechanism searches for the templates directory in the current module. If you have a lot of files in your templates directory, or you have other modules with their own templates, you might want to search the paths provided by Angular's module search mechanism to find the template. A: I think the problem is that angular is looking for the template inside

## Calendar Commander Crack + License Key Full

Calendar Commander is a program designed to create calendars and time tables in which you can add events, pictures, text notes, appointments, and dates. The time, date, and events can be customized with a large number of parameters. Calendar Commander comes bundled with elementary functions to offer a simple and fast method to design monthly and yearly calendars using your favorite images. Quick customization process It's wrapped in a straightforward and user-friendly layout divided into the options and editor tabs on the left side of the panel, and the preview area, on the right. A basic toolbar is located at the top, containing quick commands for easy access. Due to its accessibility, it can be used by both novices and experts. To start, simply press the Open button and choose the desired calendar model from the predefined ones. Their types are designed for one day, month, or year. Choose the desired photo Once loaded, you can change the picture from the Options panel, by browsing its location on the

---

computer. You can stretch the image or leave it in its original size. From the same tab, it's possible to modify the font type, title, footnote, as well as the colors for the year, title, month, the day of the week, event day, fill, footnote, and frame. Take some time to get accustomed with the editor. On the right margin of the window, the app provides a zoom slider, which can be used to zoom in and out of the calendar. The editor tab offers a more complex edit mode that uses variables to set specific properties. With a bit of practice, those parameters can be mastered by novices as well. On the left side, quick buttons are provided that represent the same settings from the editor. Save your work to JPG or BMP types. In addition, you can enter important events, which are distinctively highlighted in the calendar. You can add them from the Event function, and by inputting the occasion title, if recurrent, color, priority, start and end date. Plus, the orientation and page margins can also be set. The output may be saved as BMP, GIF, JPG, and PNG image formats, along with the color depth, size, and quality. The bottom line All in all, Calendar Commander is a useful and accessible application that
