Adjust the settings manually by adjusting the scanning options 3. Start the scan process ScanPapyrus is a reliable software that enables you to acquire data from the flatbed scanner and save it to your computer as PDF, DOCX or image formats. The software can receive data from several types of scanning devices that handle paper documents or books. Moreover, it offers you photo editing tools. Automate scanning One key feature of ScanPapyrus is the automatic scanning. This function commands the device connected to the computer to initiate the process automatically, at fixed time intervals. Thus, you have time to flip or turn pages, as well as place a different document in the dedicated scanning area. You can manually adjust the time interval between the automatic scans. Once the image is acquired, the software can automatically adjust its quality, remove gray background, crop the image or remove dust, stripes. You can set the image quality and color scheme before scanning the document. The software can also create multi-page documents, as well as automatically split facing book pages. The software features advanced algorithms that can detect page formats and separate facing pages. Image from file and photo adjustment ScanPapyrus allows you to load image files from local folders, then add them as extra pages or insert them to the current page. You may easily arrange the page order or delete the unnecessary ones. The image retouching tools allow you to rotate the current image, flip it horizontally or vertically, crop or adjust the contrast. In other words, if the quality
